## STSW-LINK007

### Firmware upgrade for ST-LINK, ST-LINK/V2 and ST-LINK/V2-1 boards

Data brief

#### Features

- The package contains:
  - An executable for Windows®
  - A Java application for Mac® OS X, Linux® and Windows®

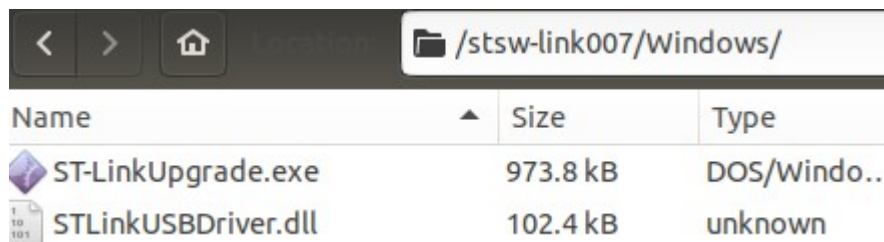

#### Description

This application, called STSW-LINK007, is used to upgrade the firmware of the ST-LINK, ST-LINK/V2 and ST-LINK/V2-1 boards through the USB port.

For more details refer to the release note "*Firmware upgrade for ST-LINK, ST-LINK/V2 and ST-LINK/V2-1 boards*" (RN0093) available from the [www.st.com](http://www.st.com) website.

3. Run the "ST-LinkUpgrade.exe"

Make sure the STM board is connected to computer.

4. A new window will appear and from there you can check if your ST-Link V-2 has the latest firmware. Option to update the firmware will be provided. You don't need to worry as the script will take care of everything.

**Note:** ST-Link V2-1 and ST-Link V2-A are basically the same.
